

# QV7

Cleaning and sanitizing work can be incredibly enhanced with the use of steam, which - in addition - guarantees considerable savings on the consumption of water and detergents.

QV7 is a steam generator ideal for domestic use, equipped with a "suction" function. This technology, called Dry-Master, allows the operator to vacuum and dry-up perfectly the surface treated with steam. In addition, the machine's exclusive Infini-Vac system offers the possibility to adjust the suction power to obtain an even better cleaning result. The boiler has a capacity of 1.5 liters, which develops 6 bar of pressure thanks to a pair of heating elements of 2400 W in total. The boiler is equipped with the exclusive Non-Stop System technology, which facilitates the continuous supply of water within the same, while the Click&Go system allows to start working with the machine within a few minutes from its switching on.

Our exclusive Flow-Master technology makes it very easy to manage steam and allows to decrease or increase its flow according to real needs. QV7, moreover, is a very safe product: our Intelli-Boiler system automatically turns off the machine in case of emergency. QV7 is equipped with the exclusive VAP Filter System, a technology patented by STI that duplicates the cleanliness of the intake air. In fact, in addition to the normal water filter, the machine is equipped with a steam filter that eliminates micro-dust, pollen and mites.

Additionally, a special technology called Airfresh-Tech allows you to clean and perfume the air inside your home/office etc.
